About Me

I am a level 200 Computer Engineering student with more interests in software engineering particularly web development, both Frontend and Backend. I developed the interest in software engineering since the end of my level 100 first semester and have been learning and practicing since and it's been a little over a year now. I have knowledge in the basic front-end development technologies which are Hypertext Markup Language (HTML), Cascading Style Sheets (CSS) and Javacript (JS) as well as frameworks and libraries including Bootstrap5 and Tailwind though I prefer working with Tailwind-CSS. I have also got a fair Knowledge of ReactJS. In addition I have a little knowledge of some backend technologies including PHP, python, Mysql and Postgress and frameworks such as Laravel and Django. I would love to work as an intern for now to be able to build on my skills and learn more if possible.

I am also interested in learning Mobile App development in the foreseeable future

Core Skills	Level
Hypertext Markup Language (HTML)	Excellent
Cascading Style Sheets (CSS)	Excellent
Javascript (JS)	Very Good
Bootstrap	Good
Tailwind CSS	Good
React JS	Good
Responsive Web Development	Very Good

Other Skills   Level

Other Skills	Level
Structured Query Language (MySQL)	Very Good
Postgress	Excellent
PHP	Very Good
Python	Good
Laravel	Good
Photoshop	Very Good
Version Control System(GIT/Github)	Good

Education

2021-Current   -   **Bachelor of Science in Computer Engineering**

University of Ghana (Legon campus)

Interests

Reading and Writing Codes

I like to read during my free times mostly about software engineering and recently also software security engineering to discover and learn new technologies.
I also write codes a lot during my free time.
